NAME: COLLINS AMADI
STUDENT ID: FWSD2511357
STUDENT EMAIL: fwsd2511357@students.icdfa.edu.ng
COURSE CODE: SBT-DF204
LAB NAME: CASE STUDY 2 INDIVIDUAL BROWSER HISTORY INVESTIGATION
DATE: 12/10/2026
INSTRUCTOR: AMINU IDRIS

This individual case study asks you to examine a Chrome History SQLite database and reconstruct an evidence-based timeline of suspected drug trafficking activity. You will identify meaningful browser records, convert timestamps, examine navigation transitions, and connect observations across postings, communications, payment references, and downloads. Your report must distinguish what the browser history directly records from what you infer about the user or alleged activity.

Case scenario

Investigators received a Google Chrome History file from a device associated with a suspect. The case hypothesis states that the browser may have been used to advertise controlled drugs, communicate with an interested buyer, exchange payment information, verify a cryptocurrency transaction, and retain proof of payment. Your task is to assess the available history evidence and construct a defensible timeline. The case requires forensic interpretation of a supplied database, not interaction with live websites, accounts, messages, or wallets.

Case materials

The supplied case file is a Chrome History SQLite database named **History**. The teaching source shown in the case materials is: added in study material section

Create a working copy before opening the database. Record the source, original file name, file size, and SHA-256 value. Use a SQLite examination tool such as DB Browser for SQLite or sqlite3. Preserve screenshots and SQL output that support your findings.

What you must submit

Item	Required output	What to provide
1	Forensic working copy	Acquire the supplied Chrome History file. Record its source, original file name, byte size, SHA-256 value, and the location of your read-only original and working copy.
2	Database examination	Identify the relevant SQLite tables and their fields. Your report must use the urls, visits, and downloads evidence that applies to your findings.
3	Reconstructed timeline	Build a time-ordered account of the browser activity. Cite visit IDs, URL IDs, timestamps, transition values, titles, URLs, and download record IDs where relevant.
4	Student report	Submit one report in PDF or DOCX format, with SQL output or screenshots, a completed evidence log, and a timeline appendix.

Investigation task

Examine the History database methodically. Base all findings on record IDs, table fields, URLs, titles, timestamps, transitions, and related download artefacts. A URL or title can indicate browser activity, but it may not prove the full content of a page, the person operating the device, or the real-world completion of an alleged transaction. Use the questions below to structure your report.

No	Investigation question	Minimum evidence to discuss
1	What evidence file did you acquire and how did you preserve it?	Report the original file name, source, file size, SHA-256 value, working-copy method, and any file-access precautions.
2	What browser-history tables and fields are relevant?	Identify the tables you examined and explain the role of the urls, visits, downloads, and downloads_url_chains data used in your case.
3	When did the recorded web activity occur?	Convert Chrome WebKit timestamps to UTC and provide the query or method. State any local-time conversion separately.
4	How did the browser reach the material URLs?	Use transition values, transition qualifiers, and from_visit links to distinguish typed or omnibox activity, links, form submissions, redirects, and navigation chains.
5	What web-history evidence relates to the suspected sale or posting?	Identify the records that support or challenge an advertisement, posting workflow, management page, or related interaction. Cite the exact artefacts.
6	What evidence relates to communications and payment activity?	Identify relevant email, image-hosting, blockchain-explorer, exchange, transaction, wallet, or download artefacts. Explain each link without assuming content that the record does not show.
7	What is the reconstructed timeline?	Create a chronological table that separates direct observations from your interpretation of the activity stage.
8	What conclusion can you defend?	Give a cautious conclusion with confidence level and at least three limitations or alternative explanations, including the difference between browser-profile activity and human identity.

Chrome History analysis starting points

Chrome stores WebKit timestamps as microseconds since 1 January 1601 UTC. Use UTC for the main investigation timeline. If you also display local time, state the time zone and conversion. Inspect the schema first because Chrome versions can differ. The following SQL provides suitable starting points, not a substitute for examining the returned records.

Purpose	Starting SQL

List the available tables	`SELECT name`
	`FROM sqlite_master`
	`WHERE type = 'table'`
	`ORDER BY name;`

Inspect a table schema	`PRAGMA table_info(urls);`
	`PRAGMA table_info(visits);`
	`PRAGMA table_info(downloads);`

Build a visit timeline	`SELECT v.id AS visit_id, u.id AS url_id, u.url, u.title,`
	`datetime(v.visit_time/1000000 + strftime('%s','1601-01-01'),`
	`'unixepoch') AS visit_utc,`
	`v.from_visit, v.transition, v.visit_duration/1000.0 AS duration_ms`
	`FROM visits AS v JOIN urls AS u ON v.url = u.id`
	`ORDER BY v.visit_time;`

Review downloaded artefacts	`SELECT *`
	`FROM downloads`
	`ORDER BY start_time;`

Transition interpretation

Use the transition field together with from_visit. To determine the basic transition type, calculate transition AND 0xFF. The case materials demonstrate base values such as 0 for a link, 5 for omnibox-generated activity, and 7 for a form submission. Qualifier bits can indicate navigation-chain start, server redirect, or refresh behaviour. State the exact value you found and explain the interpretation you used. Do not rely on the transition value alone when the URLs, titles, and linked visits provide a different context.

Required report structure

1. Case reference and student identification. Include your full name, registration number, course code, and case title.
2. Executive conclusion. State the supported conclusion in a short, cautious paragraph. Do not treat browser-profile activity as conclusive proof of a named person.
3. Evidence acquisition and integrity. Record the History source, file name, size, hash, working-copy method, and tools used.
4. Database method. List the tables reviewed and explain your SQL, timestamp conversion, joins, and transition interpretation.
5. Findings. Answer each investigation question with record IDs, URLs or titles, timestamps, transition values, SQL output, and evidence-log IDs.
6. Timeline. Present the relevant browser sequence in UTC and distinguish the observed artefact from your interpretation.
7. Attribution assessment. State a confidence level and explain limitations, including shared-device, browser-profile, redirect, cached-content, and missing-content considerations where relevant.
8. Appendices. Include labelled screenshots, selected SQL output, the completed timeline table, and the completed evidence log.

Timeline template

Use a completed version of this table in your report or evidence appendix. Add rows for all material events.

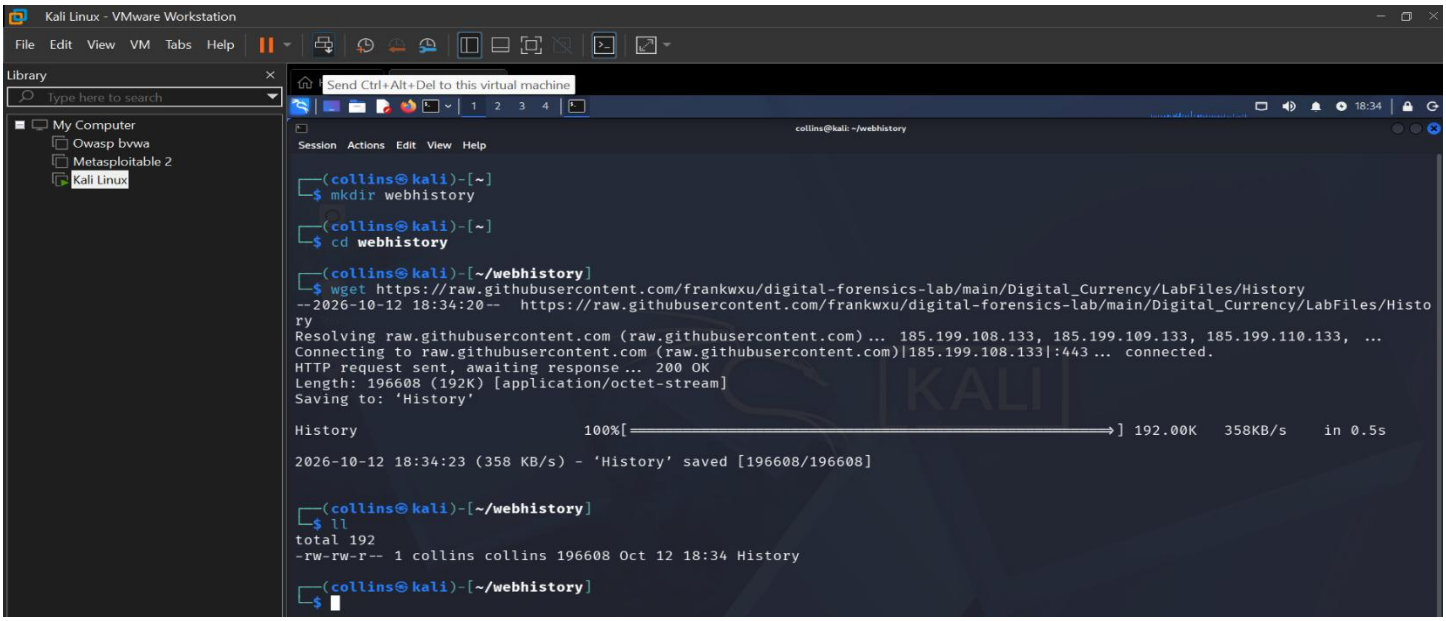

Stage	UTC timestamp	Visit or URL ID	Artifact	Observed fact	Interpretation and limit

Evidence log template

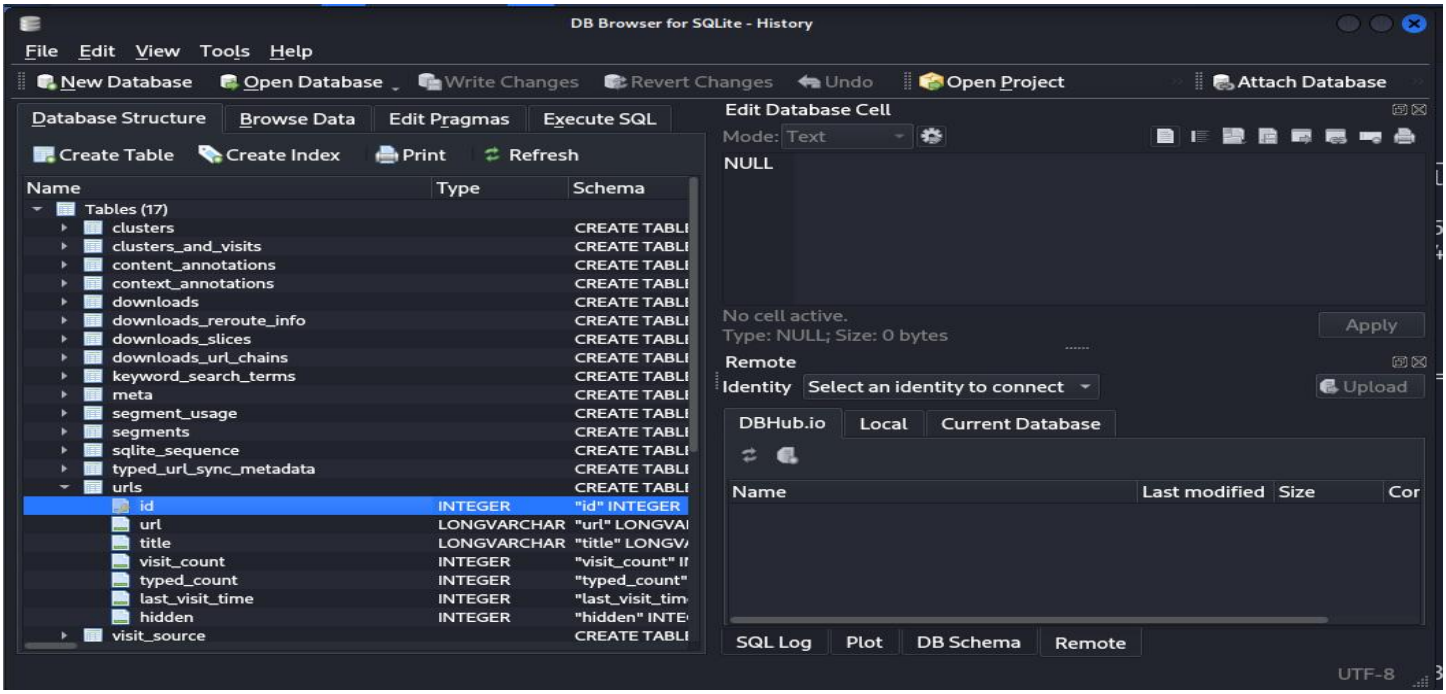

Use an evidence log that lets an assessor locate the exact database record, query result, or screenshot supporting each finding.

Evidence ID	Source record	Finding	Why it matters	SQL or screenshot reference
E01				

Evidence ID	Source record	Finding	Why it matters	SQL or screenshot reference
E02				
E03				
E04				
E05				
E06
